Abstract of FR2795599

Screen (7) has mesh of variable size (M1, M2), the smaller mesh (M1) forming the superior carrying band (7a) allows only the juice to pass through and the larger mesh (M2) forming the inferior carrying band (7b) prevents the formation of any heap of berries between the two moving bands. The small and larger mesh are the same elements (21) rotating between horizontal and vertical position. An Independent claim is also included for a harvesting machine fitted with a waste and leaves sorting apparatus.
